SANUSI AZEEM

Backend Engineer (Node.js · TypeScript · NestJS)

bljazeem@gmail.com · +234 909 502 1208 · github.com/Azeem-py · linkedin.com/in/sanusi-azeem · Nigeria · Remote-friendly

Remote-first engineer · GMT+1 timezone (4–9hr overlap with US/EU teams) · experienced working async across distributed teams

PROFESSIONAL SUMMARY

Shipped 6+ production APIs from scratch — 2,000+ REST endpoints — across loyalty, marketplace, NFC/QR engagement and affiliate platforms on NestJS + PostgreSQL, including an 813-endpoint / 106-controller backend for a QR/NFC customer-engagement platform. Backend engineer (TypeScript) with depth in payments (Paystack, Stripe, PayPal), real-time systems (Socket.io), background processing (Redis/BullMQ), multi-tenant SaaS architecture and authentication. Owns systems end-to-end, from database schema to deployed API, and documents architecture as part of the work.

TECHNICAL SKILLS

- **Backend:** NestJS, Node.js, Express, REST API design, Swagger/OpenAPI
- **Languages:** TypeScript, JavaScript, SQL
- **Databases:** PostgreSQL (incl. PostGIS), TypeORM, Prisma, Redis
- **Payments:** Paystack, Stripe, PayPal — webhooks, refunds, payouts, subscriptions
- **Real-time & async:** Socket.io, BullMQ, cron jobs
- **Auth & security:** JWT, Passport, Google OAuth, SSO, RBAC, 2FA, rate limiting
- **Frontend:** React, Next.js, Tailwind CSS, TanStack Query, Redux Toolkit, PWA
- **Tooling:** Turborepo, pnpm, Docker, Git, GitHub Actions, Vercel, Jest, Supertest, Playwright

EXPERIENCE

Lead Backend Developer — Synergify (Remote) Sep 2024 – Present

Lead backend architecture across a suite of business-management and customer-engagement products (NestJS, TypeScript, PostgreSQL, TypeORM + Prisma), owning systems from database schema design and API contracts through deployment and testing.

- **Vemtap:** architected and shipped the backend for a QR/NFC customer-engagement platform — 813 REST endpoints across 106 controllers and 148 database entities — powering real-time messaging, PostGIS nearby-branch discovery, an offline-capable POS and 148 unit/E2E test suites.
- **McomMall:** designed a multi-vendor marketplace API (580 endpoints) enabling vendors to list products and services, form seller partnerships and run loyalty campaigns, with a custom coupon, gift-card and voucher system.
- **McomReward:** built a loyalty/rewards platform (334 endpoints) letting businesses and customers earn and redeem points, stamps and tiered rewards, claim cashback, and top up wallets via Stripe and PayPal.
- **Affiliate platform:** implemented a multi-level affiliate program (257 endpoints) with commission and recruiter-override logic, KYC bank verification and automated Paystack payouts.
- **QR Thrive:** engineered dynamic QR codes that update destination and use-case without reprinting, a form/lead-capture engine, and geo-based regional pricing (95 endpoints) — integrated with Vemtap via SSO.
- Introduced **idempotency and concurrency controls** across payment, cashback and offline-sync flows to prevent duplicate credits and double-spends.
- Built **cross-platform SSO** (HMAC-SHA256 service-to-service auth) and strict multi-tenant isolation patterns reused across three products; authored architecture, API and security docs adopted as team conventions.

Freelance / Contract Engineering 2023 – 2024

- **WooManager (2024):** Led backend for a custom WooCommerce dashboard; unified WooCommerce + custom features through a NestJS REST API; wrote React Query hooks for every endpoint.
- **AffiliateBase (2023):** Backend development (Django REST Framework) with Next.js frontend integration; built bulk-upload and admin endpoints; SSG pages for SEO.
- **Yurshorpe (Apr–Jun 2023):** Real-time buyer–seller messaging and notifications with Firebase; Redux state management.

SELECTED PERSONAL PROJECTS

IssueFlow — Multi-Tenant Issue Tracker · issuefloww.vercel.app

Full-stack (NestJS, React/Vite, Prisma, PostgreSQL, Turborepo, PWA) built solo in ~2 weeks. Jira-style tracker with strict tenant isolation (DB + guard level), per-project auto-numbering, Kanban workflow, Web Push notifications, offline PWA and Cmd+K palette.

Logos (CampusConnect)

Social learning platform (NestJS, React, Prisma, Redis): institutions, communities, quizzes, TF-IDF recommendations, PWA/offline.

EDUCATION

B.Sc. Statistics — University of Ilorin, Nigeria

Final-year project: Recommendation System for Media & E-commerce (content-based + collaborative filtering).
